Step D

The right-hand thread Density bushing will thread into the hexagonal end of the billet tube

Step E

The left-hand thread Density bushing will thread into the cylindrical end of the billet tube

You are now ready to start the installation process. Use the length of the stock component as a starting point for the length of the 034 adjustable end links; expand or compress as best fits your needs

Installation Steps

Step 1

Raise the vehicle securely on jack stands, or a lift, to gain access to the rear suspension

Step 2

Remove rear sway bar mounting bracket from rear subframe. For vehicles with 034Motorsport Rear Sway Bar installed, use a 6mm allen to remove the 2 bolts securing the mounting bracket to the subframe

Step 3

Remove the lower rear sway bar end link bolt from the lower control arm. By doing this, the rear sway bar should have enough play to provide space for inner toe link bolt removal

Step 4

Locate the 2 bolts (inner and outer) securing the factory rear toe link to the rear subframe and rear hub assembly

Step 5

Using an 18mm wrench or socket, remove the outer bolt securing the toe link to the hub assembly

Step 6

Using a pair of 18mm wrenches (or 18mm socket & 18mm wrench), remove the factory nut and bolt securing the toe link to the rear subframe

Step 7

With a pry bar, dislodge the rear toe link from the rear hub assembly

Step 8

Remove the factory toe link completely from the car

Step 9

Set the new 034Motorsport Density Line Adjustable Rear Toe Link to the same length as the factory toe link by aligning the bolts through both the factory and 034Motorsport rear toe links simultaneously

Step 10

Align the bolt holes of 034Motorsport Density Line Adjustable Rear Toe Link with the rear hub assembly.

*Position such that the short spacers are on the outside (hub assembly) and taller spacers mount to the rear subframe

Step 11

Install the factory outer toe link bolt, securing the 034Motorsport Density Line Adjustable Rear Toe Link to the rear hub assembly. Leave a little loose for now

Step 12

Position the inner rod end within the rear subframe provisions and align bolt holes.

* This may take some coercion with a rubber mallet

Step 13

With the bolt holes aligned, install the factory inner toe link bolt using an 18mm socket, securing the 034Motorsport Density Line Adjustable Rear Toe Link to the rear subframe. Leave a little loose for now

DENSITY LINE ADJUSTABLE REAR TOE LINK, MKVII VOLKSWAGEN GOLF/GTI/GOLF R, 8V/8V.5 AUDI A3/S3/RS3, & MKIII AUDI TT/TTS/TTRS (MQB)

Step 14

Reinstall the lower rear sway bar end link bolt, securing the rear sway bar end link to the lower rear control arm. Torque to **35 Nm**.

Step 15

Reinstall rear swaybar mounting brackets with existing bolts. Torque to **28 Nm**.

Step 16

Double check the installation and verify that all sway bar connections are torqued to spec. Either use pole jacks to lift the rear suspension or use an alignment rack or service pit to torque the inner and outer toe link bolts on both sides

Step 17 Enjoy the improved handling and alignment adjustability!
